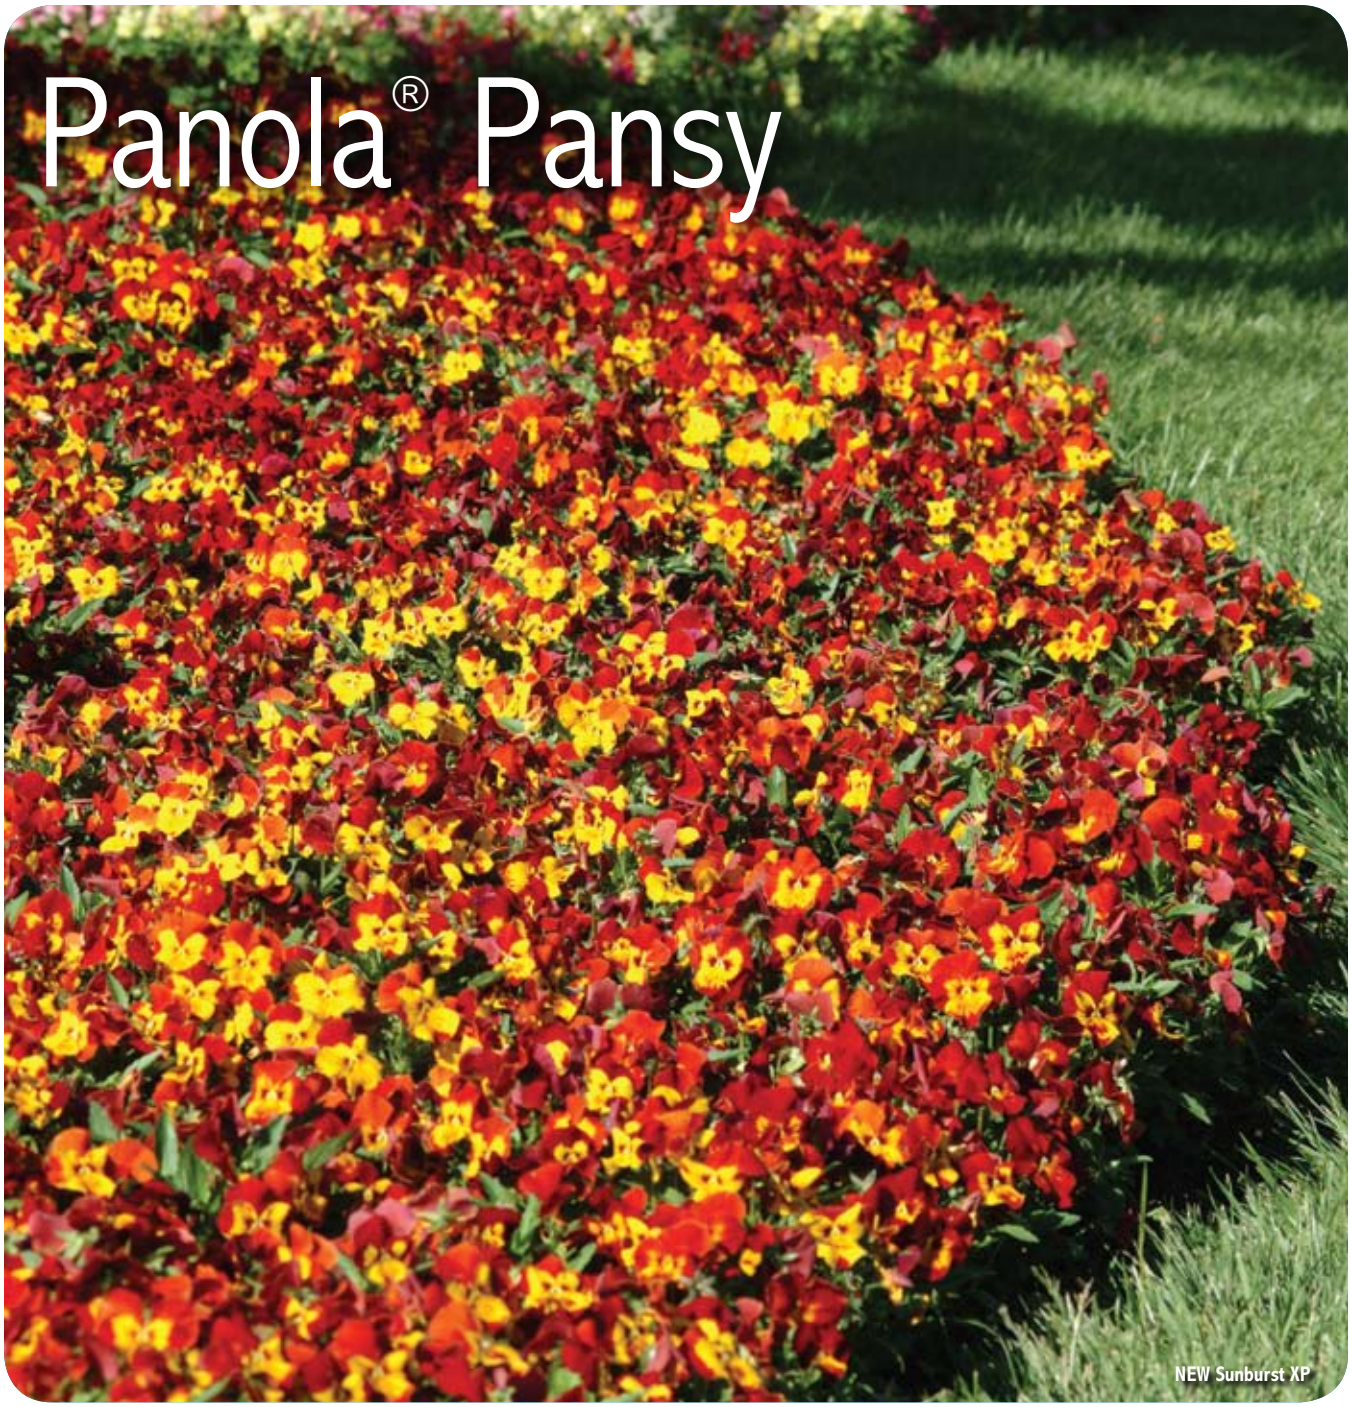
Panola® Pansy



Color-filled, early-blooming plants stretch less in heat than other pansies.

- THE landscape pansy with the most clear color choices on mid-size blooms
- Well-branched and compact for very uniform displays
- Excellent overwintering pansy

THE landscape pansy for all-around performance.

Panola Pansy: 24 colors & 10 mixes

Viola x wittrockiana

Location: Full sun (6 hours or more) to partial shade (less than 3 to 4 hours of sun each day; morning sun is best)
Height: 6 to 8 in. (15 to 20 cm)
Spacing: 8 to 12 in. (20 to 30 cm)
Fall Markets: September through November
Florida & deep South: Winter (November through February)
North: April to May for Spring flowering.

Lots of flower power: Panola multiflora pansies produce an abundance of mid-size blooms for good flower show in the landscape. Nothing adds more vibrant color to cool-season projects than mass plantings of bright Panola pansies. They're great in containers, too!

Compact with short peduncles: Even when warmer weather comes, early-blooming Panola maintains its garden height with less stretch for client-pleasing displays all season.

Well-matched: Panola pansies deliver uniform flowering and plant shape across every color, so there is no need to pick and choose from several series to get high-appeal, low-maintenance landscape performance.

Custom mixes are easy to create: The largest selection of clear colors in one series lets you customize color schemes. They're ideal for "school color" plantings or just about any other theme!

Panola pansies are bred by Ball Horticultural Company. Ball is dedicated to providing landscape professionals with the latest information and best-performing products for the landscape. Visit **balllandscape.com** today for more Landscape Color Solutions.

Ordering Your Panola Pansies
Your preferred grower needs 6 to 8 weeks to produce Panola pansies.
North: Order November to December for Spring plantings
South: Order by mid-August for Fall plantings

EasyScape® Plantable Pots Save Time & Labor, Reduce Planting Waste

- Plant up to 30% faster – go straight from tray to ground.
- Less plastic means less waste for faster clean-up – stack your trays and go.
- No "depotting," no torn roots, less plant damage, no cut fingers.
- Certified EasyScape growers use organic-based fertilizer to get plants off to a healthy, sustainable start.
