

Nature's Source® Organic Plant Food 3-1-1 Now OMRI Listed

Nature's Source Organic Plant Food 3-1-1 formulation undergoes rigorous review to achieve listing.

SHERMAN, TX – Ball DPF, LLC announces its **Nature's Source® Organic Plant Food 3-1-1** formulation is now listed by the Organic Materials Review Institute. OMRI is a national nonprofit organization that provides organic certifiers, growers, manufacturers and suppliers with an independent review of products intended for use in certified organic production under the USDA National Organic Program.

Nature's Source® Organic Plant Food 3-1-1 is one of the company's formulations that contain oilseed extract, a natural source of plant nutrition. Although previously permitted for use on organic crops by some state certifiers, OMRI product listing at www.omri.org tells organic growers nationwide that Nature's Source® Organic Plant Food 3-1-1 conforms to the USDA's National Organic Program regulations.

"Nature's Source® Organic Plant Food 3-1-1 is the first oilseed-derived plant food to be OMRI Listed®," says **Chance Finch**, general manager of Ball DPF. "We look forward to providing a high quality plant food option to organic growers."

Obtaining OMRI listed status for its Nature's Source® Organic Plant Food 3-1-1 product is another significant milestone for Ball DPF. In April the company rebranded its Daniels® Plant Food products as Nature's Source®, updated packaging design, and introduced a hose-end sprayer option to the retail market.
